GROUP MEMBERS:

Student 1644865	Amna batool
Student 1641602	Anoosha
Student 1636220	Hareem shazad
Student 1617446	Alisha zafar

CURRICULUM: ACCP AI

SEMESTER: DISM

FACULTY: Sir Tasbeel Jawed

Certificate Of Recognition & Achievement

This certificate is proudly presented to the creators of **SmartCARE - Healthcare Management System** for their outstanding contribution and innovative approach in the field of **Digital Healthcare and Medical Technology**.

The recognition of **SmartCARE** refers to an acknowledgment of the team's achievements and efforts in developing a platform that promotes easy access to **healthcare services, doctor consultations, and medical information** through digital means.

This project demonstrates excellence in **UI/UX design, database functionality, and role-based management**, contributing significantly to the modernization of **patient-doctor interaction and healthcare accessibility**.

This recognition serves as a testament to the hard work, dedication, and creativity of the development team and highlights their role in advancing **digital health solutions**.

Presented On: 10-jan-2026

Authorized Personality: Sir Tasbeel jawed

Acknowledgement & Appreciation

We would like to express our deepest gratitude to all those who contributed to the successful completion of our project, **SmartCARE - Healthcare Management System**.

Our heartfelt thanks go to **Sir tasbeel jawed** for his continuous guidance, valuable feedback, and encouragement throughout the development of this project. His expertise and support have been instrumental in helping us achieve our objectives in creating a digital platform for healthcare accessibility.

We are also thankful to our faculty members, especially **Sir tasbeel jawed** for providing us with the learning environment, technical knowledge, and motivation needed to complete this project effectively.

A special note of appreciation goes to our team members for their hard work, cooperation, and dedication. Their collective efforts, creativity, and problem-solving skills played a vital role in bringing this doctor-patient management system to life.

We would also like to extend our gratitude to our families and friends for their continuous support, patience, and encouragement throughout this journey.

Finally, we thank everyone who directly or indirectly supported us with resources, guidance, and inspiration. This project would not have been possible without their contribution and encouragement toward modernizing digital healthcare.

Project Synopsis

The SmartCARE - Healthcare Management System is a web-based platform designed to provide users with convenient, efficient, and digital access to healthcare services and medical information. The system aims to eliminate the traditional barriers of manual appointment booking by offering an easily accessible and user-friendly online alternative for patients, doctors, and healthcare administrators.

The main objective of the project is to create a centralized digital healthcare hub that allows patients to browse specialist doctors, book appointments, and access medical knowledge

(Medical Wiki) from anywhere, at any time. This system provides an intuitive interface for three distinct roles:

- **Administrators:** Can manage doctor registrations, update medical news, and maintain the disease information database.
- **Doctors:** Can manage their professional profiles, set consultation fees, and handle appointment requests.
- **Patients:** Can Explore Doctors Based On Specialization Or City And Book Appointments Instantly.

The SmartCARE System is developed using modern web technologies (PHP & Tailwind CSS) to ensure scalability, security, and performance. It emphasizes key features such as:

- User Authentication & Rbac: Secure Login And Role-Based Access For Admin, Doctors, And Patients.
- Specialist Search: Categorized Search Functionality Based On Medical Specializations And Cities.
- Appointment Management: Real-Time Booking System With Status Tracking (Pending/Confirmed).
- Medical Wiki & News: A Dedicated Section For Disease Prevention, Cures, And Latest Health Updates.

Responsive Interface : A mobile-friendly design ensuring accessibility on all devices.

This project is particularly beneficial for the healthcare sector as it promotes digital health records, reduces waiting times in clinics, and supports an organized approach to patient care. The development of SmartCARE not only enhances technical and programming skills but also

demonstrates the importance of using technology to make healthcare more accessible, efficient, and life-saving

Medical Specializations And City Classification

The **SmartCARE - Healthcare Management System** organizes medical services into well-defined specializations and locations to make it easier for patients to browse and find the right healthcare professional. Instead of searching through unorganized lists, users can filter doctors according to their specific health concerns or geographical convenience.

Some Of The Main Medical Specializations Include:

- **Cardiology** (Heart Specialists)
- **Dermatology** (Skin Specialists)
- **Pediatrics** (Child Care)
- **Neurology** (Brain & Nerve Specialists)
- **Orthopedics** (Bone & Joint Specialists)
- **General Physician** (Common Health Issues)

Additionally, The System Categorizes Doctors By Major Cities Such As:

- **Karachi**
 - **Lahore**
 - **Islamabad**
 - **Faisalabad**
- (And Other Cities As Managed By The Admin)

Problem Statement & Background

Visiting a doctor is a common requirement for individuals, whether due to emergency situations or planned medical checkups. In most cases, patients are required to physically visit clinics or hospitals to inquire about doctor availability or to book appointments, often resulting in long waiting times and inconvenience.

CARE Group has been providing medical services for a long time and, considering the current challenges in the healthcare sector, has decided to develop a centralized **web-based medical services platform**. This platform will host medical services available across different cities and enable users to search for specialist doctors and book appointments online.

The proposed system aims to eliminate long queues, reduce manual appointment handling, and provide easy access to medical services. The website will maintain complete and secure records of doctors and patients while offering online appointment booking and healthcare-related information.

Proposed System Overview & Architecture:

The Care Group Medical Website Will Serve As A Centralized Platform Where:

- Patients Can Search For Doctors Based On City And Specialization.
- Doctors Can Manage Their Profiles And Availability.
- Administrators Can Manage All System Data And Users.

The system will maintain complete information about doctors, patients, appointments, diseases, prevention methods, and medical advancements.

Customer Requirements & Specifications:

The website will provide:

- Information about common diseases, prevention methods, and available cures.

- Latest Medical News And Updates On Innovations In Medical Science.
 - Online Doctor Search And Appointment Booking Functionality.
 - Secure Storage And Management Of Doctor And Patient Information.
-

Defined User Roles:

The System Will Support The Following Three User Roles:

1. Administrator
 2. Doctor
 3. Patient
-

Administrator Functional Requirements & Responsibilities:

The Administrator Will Have Complete Control Over The System And Will Be Able To:

- a) Add cities to the master database
 - b) Add doctors to the master database
 - c) Modify doctor details
 - d) Modify patient details
 - e) Delete cities
 - f) Delete doctors
 - g) Delete patients
 - h) Create and manage user accounts and login credentials
 - i) Manage and update website information and content
-

Doctor Functional Requirements & Capabilities:

The Doctor Will Be Able To:

- a) Log in to the system using a secure username and password
- b) View personal profile details
- c) Add professional and personal information to their profile
- d) Modify and update profile information
- e) View scheduled appointments
- f) Update availability on a daily, weekly, or monthly basis

Patient Functional Requirements & Capabilities:

The Patient Will Be Able To:

- a) Register and create an account (User ID must be unique)
 - b) Search for doctors based on location and specialization
 - c) Book appointments after checking doctor availability
-

Mandatory Information & Data Requirements:

The following details must be provided by both Doctors and Patients during registration or profile creation:

- Name
- Address
- Phone Numbers
- Email ID

Detailed Requirement Specifications

The web-based SmartCARE - Healthcare Management System is designed according to the following functional and non-functional requirements based on its current architecture:

- 1. Home Page & Navigation:** The home page includes the SmartCARE logo, a professional navigation menu (Header), and an introduction to services. It provides quick links to "Specialist Doctors," "About Us," "Contact," and "Medical News."
- 2. User Registration & Login (RBAC):** The system supports three distinct login portals (Admin, Doctor, Patient). It ensures secure access to dashboards based on the user's role (Role ID: 1, 2, or 3).

Doctor & Patient Management:

- **Administrators** can register new doctors, generate their secure credentials (username/password), and manage city lists.
- **Doctors** can update their professional profiles, including consultation fees, experience, and availability.

4. Search & Filter Functionality: Patients can search for expert doctors using filters like **City** (location-based) and **Specialization** (e.g., Cardiology, Pediatrics) to find the right consultant quickly.

5. Online Appointment Booking: Users can select a doctor, choose a preferred date and time slot, and describe their symptoms to book an appointment instantly. The status (Pending/Confirmed) is tracked in real-time.

6. Medical Wiki & Content Management: The Admin can upload and manage medical information, including:

- Common diseases, their prevention, and cures.
- Latest Medical News And Health Innovations.

7. Responsive & Modern UI: The system is built using Tailwind CSS, making it fully responsive across mobile, tablet, and desktop devices with a clean, medical-themed interface.

8. Security & Data Integrity:

- **Encryption:** Passwords are encrypted using `password_hash()`.
- **SQL Protection:** All database queries are sanitized to prevent SQL injection.

Manage_Doctors.Php

The screenshot shows a Microsoft Edge browser window with the title "SmartCARE". The address bar also displays "SmartCARE". The main content area is a code editor showing a PHP file named "manage_doctors.php". The code handles the deletion of a doctor from the database and then redirects to the "manage_doctors.php" page. The code uses MySQLi and includes header files like auth/check_login.php and config/db.php. The UI includes a navigation bar with links to admin.dashboard.php, manage_doctors.php, manage_patients.php, manage_injured.php, and manage_cities.php.

Medical_Info.Php

The screenshot shows a Microsoft Edge browser window with the title "SmartCARE". The address bar also displays "SmartCARE". The main content area shows a PHP application interface. The page has a header with a navigation menu (File, Edit, Selection, View, Go, Run, Terminal, Help) and a search bar. On the left, there is a sidebar with various icons and a list of files: care_db (1).sql, about.php, doctors.php, facilities.php, login.php, medical_info.php (which is the active tab), global.jpg, index.php, contact.php, and header.php. The main content area contains a PHP script for displaying medical information. The script includes database queries to fetch data from a MySQL database named "care_db". It handles cases where an image URL is empty or missing, providing a placeholder image. It also displays prevention measures and treatment/cure information for the patient.

```
<?php
include('auth/check_login.php');
include('config/db.php');

News_Details.Php

A screenshot of a Windows desktop environment. In the center is a code editor window titled "SmartCARE" showing the file "news_details.php". This file handles the retrieval of a specific news article by its ID from the database and displays its details. The code includes a check for the news ID being set via POST. If it's not set, it redirects back to the main news page. It then queries the database for the news item and displays its title, image (if available), and content. The content is escaped before being printed. The code uses Bootstrap for styling. The interface is similar to the one in the first screenshot, with tabs for other files and a taskbar with various application icons.

```
<?php
include('config/db.php');
include('includes/header.php');

$id = isset($_POST['news_id']) ? mysqli_real_escape_string($conn, $_POST['news_id']) : 0;

if ($id == 0) {
    echo "<script>window.location.href='medical_news.php';</script>";
    exit();
}

$news_query = mysqli_query($conn, "SELECT * FROM medical_news WHERE news_id = '$id'");
$news = mysqli_fetch_assoc($news_query);
>>
