ABOUT THE PROJECT:

- **Project Overview:**

       SmartCARE is a web-based platform that allows patients to search for specialist doctors in their area and book online appointments.

- **Objective:**

       To provide a convenient and efficient way for patients to access medical services.

SOLUTION AND FEATURES:

❏ **Solution Overview:**

SmartCARE provides a comprehensive platform for doctor-patient interaction.

❏ **Features:**

- Search for doctors by location and specialty.

- Book online appointments.

- View doctor profiles and availability.

- Manage patient records and appointments.

- Administrator dashboard for managing users and data.

USER ROLES AND RESPONSIBILITIES:

Administrator:

- Manage users and data

- Add doctor

- View and manage appointment

Doctor:

- View and manage profile details

- View appointments

- Update availability

Patient:

- Search for doctors and book appointments

- View and manage profile details

- View appointment history

CONCLUSION AND FUTURE WORK:

❑ Conclusion:

- SmartCARE provides a convenient and efficient way for patients to access medical services.

❑ Future Work:

- Integrate payment gateway for online payments.

- Develop mobile app for patients and doctors.

- Expand services to more cities and specialties.
